

Maestro Applications

Maestro is a web-based configuration utility used to set up all HDbridge and ZvPro products, available for download on zeevee.com. Technical details and instructions can be found in the Application Notes located in the Documentation section of zeevee.com.

ZvShow

ZvShow is a free bonus channel that you configure on ZvPro or HDbridge 2000 series products, and is in addition to the channels already offered on the unit. The content for this channel is played from a stored file that resides in the ZeeVee product. The video is looped continuously on the new ZvShow channel.

The user loads a video clip into an internal on-board storage. That video clip is encoded and played just as if it had come from a different video source.

Common Uses

The videos running on the ZvShow channel are typically simple, signage-like video clips (250MB file or approximately 4 minutes in length), that can be used for many applications. The uses are endless:

- Promote special menu items and business activities
- Commercials, announcements, and events
- Fitness activities and wellness information

ZvSTB - Set Top Box Control

ZvSTB Control allows for simple control of H25 DIRECTV receivers (also called set top boxes) through Maestro. To use ZvSTB Control, you configure the set top box and then Maestro to manage the box. With ZvSTB you can control the H25's:

- Power On/Off
- Channel Number
- Channel Name

Common Uses

- Remote management to reduce truck rolls
- Fix channel outages
- Reset after troubleshooting or updating firmware

ZvEAS - Emergency Alert System

ZvEAS provides a remote alert option within Maestro and can also integrate with your existing EAS system to trigger alerts automatically. In both cases, an emergency alert activates an override so all channels in the headend display the emergency message.

Common Uses

- Safety alerts on college campuses
- Emergency weather warnings
- Intruder alerts
- Corporate office security alerts
- Stadium evacuations / emergency announcements
